

**Experiment No: 17 Develop a Program to validate username and password that are stored in database using PHP.**

**Index.php**

```
<head>
<title>Document</title>
</head>
<body>
<form action="login.php" method="post">
    UserId : <input type="text" name="uid"><br>
    Password : <input type="password" name="pass"><br>
    <input type="submit" value="Submit">
</form>
</body>
</html>
```

## **Login.php**

```
<?php  
$uid=$_POST['uid'];  
$pass=$_POST['pass'];  
$link=mysqli_connect("localhost:3307","root","","d1");  
if(!$link){  
    die("Link can't establish ".mysqli_connect_error());  
}  
$sql="select * from users where uid='".$uid' AND pass='".$pass"';  
$result=mysqli_query($link,$sql);  
if(mysqli_fetch_array($result)){  
    echo "<h3>Welcome ".$uid."</h3>";  
}  
else{  
    echo "<h3>Incorrect UserId/password</h3>";  
    include 'index.php';  
}
```
